# VENDOR LISTINGS

## WELCOME

Brad, Tanya, Thomas, Breanna, Monique and Amelia of Red Rock Dorpers and White Dorpers would like to extend a warm welcome to all participating in our 22nd On-property Ram Sale. The Rams are in great order Ready to go to work, most are fully shedded or half way throw shedding. We selected the Sale Rams for their early maturity, muscle and fat depth, conformation and temperament. This year the rams have been pre selected with the help of Colene Grevelinki. Wicus Cronje has been through the ram on the 18/09/2023 and has helped with the final offering of Rams. This years New Sires in the Dorpers are Dell Dynamite and Kaya Atomic both rams have some very stylish Rams in the sale, we will again have progeny from Bull 200201, Edson 188346 (a Dipstick Son), Edson 188387 and Edson 188420.

Red Rock White Dorpers Sale Rams are sired by our own bloodlines which are proving that they are robust, great twiners and hardy, We will also have rams Sired by Normulla Lowie, a full shedding ram with exceptional feet currently weighing 115kg with a 5 4EMD and fat of 9 and Kaya Ron 107kg 50 EMD and fat of 7, also a full shedding ram.

This year most of the rams have lambplan figures, but all will have actuals scanning will be done by Nick Lawrence an accreted lambplan scanner.

ClassiMate scores will be on Auctionsplus to help with the selection of your rams. Brad and Tanya will use the program to assess each animal out of 10. Each ram will have a score chart printed out showing you if the ram is stud or commercial and where they lost points.

A veterinary certificate may also be requested at the vendor's discretion. The Ram shall be replaced with an animal of comparable value or credit to the full purchase price will be given at the following sale or on a private sale animal.

# LAMBPLAN EXPLANATION

## KEY BENEFITS

LAMBPLAN enables sheep breeders to enhance their ability to select the correct ram for their enterprise, to improve the rate of genetic gain of their flock and to more reliably meet market specifications and improve overall productivity. Only LAMBPLAN provides a benchmarking system that allows breeders to track the level of improvement in the genetic make-up of their flock.

LAMBPLAN provides flexibility enabling ram breeders to concentrate on the traits considered important to their breeding objectives and the requirements of their clients. Commercial buyers can use LAMBPLAN ASBVs to objectively compare rams and identify those which best suit their production system and market targets.

An ASBV is an estimate of the genetic potential an animal will pass on to its progeny. ASBVs are available for a range of economically important traits and are designed to be used in conjunction with visual selection.

The appearance and performance of an animal is a combination of its genes and the environment in which it is raised (e.g. the amount and quality of feed, single / twin / triplet birth). ASBV's account for these environmental effects, allowing the comparison of sheep based on the genes they will pass on to their progeny. It is important to remember when selecting sheep, you are choosing the genes, not the environment.

Birthweight ASBV's (BWT) estimates the genetic difference between animals in weight at birth.

Liveweight ASBVs (WWT & PWT) indicate an animal's genetic merit for growth. A more positive ASBV means the animal is genetically faster growing.

WWT: Rams with a more positive weaning weight (WWT) will on average produce lambs that grow more quickly to weaning (100 days).

PWT: Rams with a more positive ASBV for post weaning weight (PWT) produce lambs that grow more quickly and reach target weights in a shorter time. PWT estimates the genetic difference between animals at 225 days of age.

We caution against 'over-selecting' for traits such as high growth while not checking that the animal has length and width and depth and balance.

# LAMBPLAN EXPLANATION

Fat depth ASBVs (PFAT) describes the fat depth of an animal at a constant weight. A more negative ASBV means a genetically leaner animal.

PFAT: Rams with a more negative ASBV for post weaning fat (PFAT) will produce lambs that are leaner at the same weight. Post weaning fat estimates the genetic difference between animals at 225 days of age.

In a self-replacing flock, fat is important, not only for eating quality. Ewes need fat to milk and mother and maintain body condition, especially in dry climates. Fat helps the ewe to conceive readily and to successfully raise her lambs. In wetter climates, positive fat is not as important as the climate is kinder.

Eye muscle depth ASBVs (PEMD) describes an animal's genes for eye muscle depth at a constant weight. A more positive ASBV means a genetically heavier muscled animal that will have slightly more of its lean meat in higher-priced cuts. A positive PEMD increases the value of the carcass by increasing the amount of lean meat it contains, as well as the dressing percentage.

PEMD: Rams with more positive ASBV's for eye muscle depth (PEMD) produce lambs that have a higher lean meat yield. Post weaning muscle depth estimates the genetic difference between animals at 225 days of age.
